SYNACX

Take back control of your applications.

Understand the existing landscape. Make changes more reliable. Deliver new services with AI.

SynACX connects business needs, application knowledge, the backlog, Git and AI-assisted execution in one manageable workflow.

Take over an existing application

Industrialize maintenance

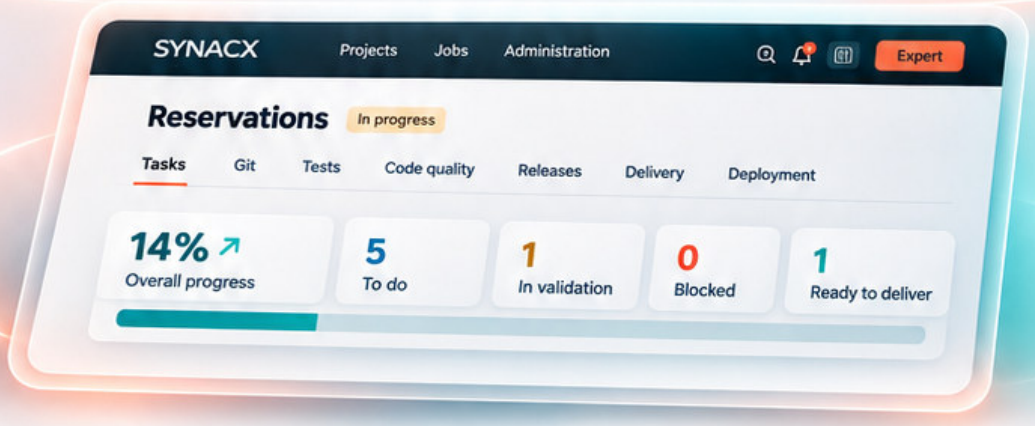

Regain control of the application landscape

Create new services with AI

How SynACX creates value

Frame » Structure » Execute » Verify » Govern

The context stays attached to the work.

- Less dependency on implicit knowledge
- Better support-to-delivery continuity
- More visible decisions
- Faster idea-to-backlog flow

Business value you can prove quickly.

Choose a concrete scope, launch a pilot and measure the difference on a real case.
